SAFTY FIRST

- ALWAYS TURN THE LSV OFF AFTER USE!!!!!!!!
- Be careful when the Life Saber Vaporizer is turned on. The LSV gets HOT, and the heater (glass and ceramic) gets extremely hot and will burn you severely if you touch it! Do not touch the heater for any reason when the LSV is turned on, it is extremely HOT!
- Keep the LSV away from combustible materials including but not limited to paper, plastic and fabric or anything else you think could catch fire.
- Keep out of reach of children and pets and do not leave on unattended.
- Do not let hair or any loose clothing come in contact with the heat source as it may catch fire.
- Never touch the ceramic heater while it exposed for use as a butane-free lighter, and always allow it to cool down before re-assembling the vaporizer. Never touch the glass heater cover when in use or up to 30 minutes after use so the glass can cool.
How it works

Briefly, the vaporizer allows a person to inhale essential ingredients from herbal material without the use of fire. The LSV uses hot air to warm the plant matter until active ingredients are heated high enough to boil, vaporize, and be absorbed by the air. Instead of using fire to burn the ingredients out of the plant matter, our product releases the ingredients quickly and efficiently through vaporization without ingredient loss, tar, and odors associated with smoking.

The glass transfer is packed lightly, not more than 3/4 full, or around ½-3/4 of an inch. As soon as the transfer is connected with the heating element of the vaporizer, the user inhales instant vapor through the transfer. Vapor goes into the transfer almost clear to light white and is exhaled as a cloud of white mist. Your lungs' health remains intact as they are not inhaling the plant ash and tar created from the combustion of smoking. The standard size transfer offers about 3-7 big inhales before the herbal material becomes brown. Stir it up and try again repeating the stir technique until vapor becomes little to none. The user blows through the transfer into a container or trash receptacle to expel the spent herbal matter.

USE INSTRUCTIONS

Traditional Use (With the included glass transfer)

Getting the right vapor draw is a science. LSV owners learn their machine after a few practice sessions. Get used to packing small amounts, fluffed up slightly. We recommend the following procedure:

1) Turn on the unit to a somewhat high level to heat up the unit. The unit should be left on a high heat for about 2 minutes before being turned down to the preferred heat for use for faster heat up. Or you can turn it to your desired location (roughly ¾ full power) for about 2-3 minutes and it should be ready to vaporize!

2) Turn the LSV’s power back about 1/4-1/2 the full power and the unit should be ready to use. For the first use, you should try a lower setting and gradually turn the LSV up until vaporization occurs. This will ensure that you do not have the LSV turned up too high and catch your herbal matter on fire. This is what you want to avoid! After some use, you will be able to find a perfect setting for the LSV. If your materials turns very dark brown or black, the temperature is up too high or you are inhaling too slow and combustion is occurring, not vaporization. Turn the LSV down or inhale faster to solve this issue. You will learn it!

3) Grind up your herbs while the unit is heating. You can use a grinder, knife or fingers, but make sure that the material is broken up. We recommend using a grinder that you can get on our website if you do not already have one.

4) Place your herbs into the bowl on the glass transfer. You can accomplish this by using your fingers and putting it in or vacuuming up the ground herb through the transfer like in figure 1. Do not fill the wand too much (1/4-3/4 full is the maximum you want to put in).

   NOTE: You do not need to use much material here. 1/2 of an inch is a good amount to start with, as you are learning how to use your LSV. Stir your herb occasionally after inhaling to ensure that the maximum amount of surface area of your herb is exposed to the hot air. This will help you get the most out of your herb as you vaporize.

5) Invert the LSV to insert the loaded transfer into the heater cover. Then turn the LSV around to be able to use and inhale a full breath (draw). When you exhale, you should see a white mist. This ensures that you have the heat set to the right temperature, if you do not see white mist, try again by inhaling slower.
or increasing the heat. Use caution when increasing the temperature, the element can get hot enough to
burn your material. Remember that getting to the right heat setting and inhaling the proper draw takes
time, and you will learn as you go.

**NOTE:** Be sure not to inhale too slow as this will cause the material to burn and possibly catch
fire.

![Image](image.png)

**Figure 1.**

**Grind it up!**   **Suck it up!!**   **Vaporize it up!!**

**Use as a Butane-Free, Flame-Less Lighter**

**CAUTIONS BEFORE USE**

1. Turn on the vaporizer away from face and clothing
2. Be sure the vaporizer is completely unplugged and cooled down after use.
3. Never use near water or with wet hands.
4. Do not touch ceramic heating element at anytime during use or while it is cooling down.
5. Do not apply excessive pressure on the heating element. Approach the herbal matter parallel and
   hold just above the herbal material. Do not touch the herbal material with the heater, just hold
   about ¼ inch away from the material to catch it on fire.

**USE INSTRUCTIONS**

1) Remove the top two portions of the vaporizer (the cap and heat shield). Remove the glass heater cover
gently so as not to cause possible breakage. Turn on the vaporizer and allow it to heat up as instructed
with traditional use only here you can turn it up all the way.

2) Place glowing ceramic heater about ¼ inch above and parallel to the herbal matter.

3) After use turn the unit off and replace only the top (the cap and heat shield). Do not replace the glass
   heater cover at this time as the unit is still very hot and could burn you very seriously! After the unit
   has cooled down to room temperature (about 30 minutes) you can replace the glass heater cover.

**Use with the Water-pipe Attachment**

**CAUTIONS BEFORE USE**

1. Turn on the vaporizer away from face and clothing
2. Be sure the vaporizer is completely unplugged and cooled down after use.
3. Never use near water or with wet hands.
4. Do not touch ceramic heating element at anytime during use or while it is cooling down.
USE INSTRUCTIONS

1) Remove the top cap portion of the vaporizer. Do not take the glass heater cover off. Turn on the vaporizer and allow it to heat up as instructed with traditional use.

2) Place your ground herbal material in the LSV water pipe adapter bowl. Fill your favorite water filter with water and ice. You must have a ground glass downstem for the LSV water pipe adapter to work. Then place your LSV water pipe adapter in your water filter. Invert your LSV and place on top of the LSV water pipe adapter and inhale.

3) After use turn the unit off and replace the cap.

REPLACING THE SCREEN

Some day you will need to replace your screen. After a little practice this can be a very easy process. The first thing is to remove the screen from the transfer. This is easily removed by taking the supplied pick and just prying it out. To put in your new screen, go ahead and push in the screen, so that it goes in the front of the transfer. Push it down towards the end of the ground glass part. When the screen hits the bottom of the hour glass part, you will want to flip the screen. This will cause the bottom part of the screen to catch in the lip of the glass. Then push the other side down into place and the screen will pop in.

LIMITED LIFETIME WARRANTY

7th Floor, LLC warrants, to the original purchaser only, that the Life Saber Vaporizer will be free from defects in material or workmanship for the original purchasers’ life (excluding glass and electronics). 7th Floor, LLC will repair or replace the defected part for free excluding labor. We offer a 3 (three) year warranty on the electrical parts of the Life Saber Vaporizer. We offer a 30 day warranty on the glass due to manufacturer defects. Glass is not covered due to accidents. 7th Floor, LLC is not responsible for shipping charges. To make a claim under this Limited Warranty, you must return the Life Saber Vaporizer unit, transportation prepaid, to: 7th Floor, LLC, 6331 East Platte Ave., Colorado Springs, Colorado 80915. Warranty does not apply to any glass parts such as knob, heater cover, transfer, mouthpiece or any other glass part. The 3 year warranty is void if any liquids are spilled on or in it. Abuse also voids the warranty.

Maintenance and Service

WARNING! Opening up the Life Saber Vaporizer and tampering with any wires voids the warranty. There is no reason to open the Life Saber Vaporizer. We recommend that 7th Floor, LLC perform all service work.

For warranty work (which you will not need hopefully) or for any information contact: customercare@7thfloor.biz and in the subject line put silver surfer warranty, or call 1-866-835-6418. You must provide a copy of your receipt or proof of the date which you purchased your Life Saber Vaporizer to take advantage of the warranty. So hold on to your receipt!
